## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 5, 2008 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. ***Claims 3-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Toboni et al. (Patent No. US 5,340,122)***

Regarding claim 4, Toboni et al. shows in Fig. 4 a sensor shaft defining an axis; a bearing for support of the sensor shaft; a coding disk disposed on the sensor shaft at a distance to the bearing; and a ferrofluid seal disposed in the direction of the axis between the bearing and the coding disk in close proximity to the bearing and in close proximity to the coding disk so as to prevent lubricant from migrating from the bearing

Art Unit: 2878

toward the coding disk, said ferrofluid seal including ferrofluid liquid aligning in a sealing gap between the sensor shaft and a confronting end of a flux guide element of the ferrofluid seal.

**Regarding claim 3**, Toboni et al. shows in Fig. 4 a sensor flange supported by the sensor shaft via the bearing, wherein the ferrofluid seal includes a magnet which is magnetized axially and has opposite end faces, two of said flux guide element disposed respectively at the end faces for defining two of said sealing gap for ferrofluid liquid.

**Regarding claim 5**, Toboni et al. shows in Fig. 4 that the bearing is constructed to support the sensor shaft without play.

**Regarding claim 6**, Toboni et al. shows in Fig. 4 the ferrofluid seal includes a magnet which is magnetized in axial direction so as to generate a magnetic field which is closed via the sensor shaft to effect the alignment of the ferrofluid liquid, said flux guide element disposed at one end face of the magnet.

### ***Response to Arguments***

4. Applicant's arguments with respect to claims 3-6 have been considered but are moot in view of the new ground(s) of rejection.
